

**Adams Rural Electric Cooperative, Inc.
Electrical Inspection Requirements**

BEFORE YOU INSTALL a new service, an Adams Rural Electric staking engineer must visit your site to determine the location and type of service. After that step in the process has been completed, an electrical inspection is recommended and often time required.

Before Adams Rural Electric will **CONNECT** and **ENERGIZE** either a new or existing service location, you must have an electrical inspection performed and provide the cooperative with documented verification of the inspection. Completion of this form provides that required verification.

For a Manufactured Home, the inspection must be performed by an electrical inspector certified by the Ohio Manufactured Homes Program of the Ohio Department of Commerce.

For non-manufactured homes or other non-residential services, the inspection must either be performed by the local inspection authority or in an area where there is no local inspection authority the inspection must be performed by a licensed electrician in the State of Ohio. If you are not required to have an inspection by a local inspection authority, the member can choose to attest that they assume full responsibility for their service and forego the electrical inspection.

Return the completed form to the address below authorizing the cooperative to connect electric service.
